**Your bio-scanner shows the zone's ecological void as sharply as a wound. Linguistics translates system logs. Medicine reads Marr's condition. In Act Three the system displays your xenobiological profile – it catalogued you as a variable the moment you arrived. KEY: Science (Xenobiology) · Linguistics · Medicine**

**Serenthis calls you by name before you introduce yourself. Your training recognises neurological encoding, not just language. Something has been written into her. The bond runs through you.**

## EVENT 95 – A QUESTION OF SINGULARITY

**Awareness makes you first to notice repetition. You'll set perimeters when no one else thinks to. In Act Three, when Vorn orders withdrawal, the crew looks to you: follow orders, or stay for the science?**  
**KEY: Awareness · Tactics · Combat if loops turn physical**

## EVENT 96 – IS LOVE THE ANSWER?

**You read Ghresh-Ka before the crew does – converging, not hostile yet. If RR'raan challenges him directly, back them. It's the only gambit. Your job if it goes to a fight is to buy time, not to win.**  
**KEY: Tactics · Awareness · First Aid if crew hit**

**Your Engineering immediately flags the Spire drawing power far beyond stated function. Science (Physics) + Computer crack the logs together. In Act Three, you can feed the system the structural data it needs.**  
**KEY: Engineering · Science (Physics) + Computer · Pilot for exit**

The vault power draw is active. Engineering tells you it is running.  
Vorn's weather warning is your cue to calculate extraction windows.  
You'll be flying the landing craft home through whatever the storm is.
